## .NET DEVELOPER

Specializing in ASP.NET Core MVC and ASP.NET Core frameworks. C#, SQL Server/MySQL, Entity Framework/Dapper ORM on backend. Angular, JavaScript/TypeScript, HTML, CSS on front. Azure deployment. Swagger API development. Git version control. Visual Studio editor.

## EDUCATION

### TrueCoders | Full-Stack Software Engineering | Nov 2021 – Jan 2022

Earned certificate for 500+ hours of intensive training in technologies such as C#, SQL, ORMs, JavaScript, HTML, CSS, frameworks, libraries, APIs, JSON, deployment, repositories, and Git. Trained in SOLID principles, Test-Driven Development, REST, and other fundamentals of OOP.

### Codecademy | Programming | Sep 2021 – current

Earned course certificates for “Data Structures and Algorithms,” “Angular,” “Flask,” and “Python.”

### Asbury University | Business Management | Aug 2008 – May 2011

Earned Bachelor of Arts degree, graduating in 3 years with 3.96 GPA.

## PROJECTS

View these and other projects on Portfolio Website: <https://tim-honchel.github.io/>

### Historical MLB All Stars | C# on ASP.NET Core MVC with SQL Server, EF, JS, HTML, Azure

- Generates 25 player all-star team for any time period and team entered into form.
- JavaScript functions validate the time period, manage image slider, and facilitate a loading page.
- Uses HttpClient class and threading to asynchronously get HTML from 11 interpolated web pages.
- Uses HTML Agility Pack to parse HTML into player objects with statistics as attributes.
- C# functions construct a roster with the top statistical players who meet certain criteria.
- Entity Framework ORM saves results in SQL Server database, bypassing future web scraping.
- Cloud deployed with Azure App Services and Azure SQL Database.

### Best Prize Store | C# on ASP.NET Core MVC with MySQL, Dapper, HTML, CSS, Azure

- Website where educational programs create their own online store for students.
- MySQL tables for admins, stores, students, prizes, orders, and deposits.
- ASP.NET models, views, and controllers for each table, with Dapper serving as ORM.
- C# repository design pattern for performing CRUD operations to database.
- Password authentication. Authorization using static class properties.
- Data validation with dropdown lists. Error handling with try-catch statements.
- Cloud deployed with Azure App Services and Azure Database for MySQL.

### Predictive Keyboard | TypeScript on Angular, C# on ASP.NET Core with HTML, CSS, Azure

- Alternative for devices that lack a built-in keyboard, such as TVs or game consoles.
- Up, down, left, right, center buttons trigger TypeScript primary program flow functions.
- Primary functions call Angular services for switch-case logic, loops, LINQ methods, and global variables.
- HttpClient get requests to ASP.NET Core Web API return most likely characters and results to display.
- As the user clicks the buttons, Angular component property binding updates the HTML.
- Deployed with Azure App Services and Azure API Management. API structured with Swagger.

## WORK EXPERIENCE

### Executive Director | Kids in New Directions | Sep 2019 – Oct 2021

Increased student attendance by 12%, cash reserves tenfold, and cut staff turnover by 75%.

### Business Planning Consultant | Honchel Consulting LLC | Dec 2012 – Aug 2019

Provided market research, financial analysis, project management, and recruitment services.
